# Communicating the Value of Open Source Metrics

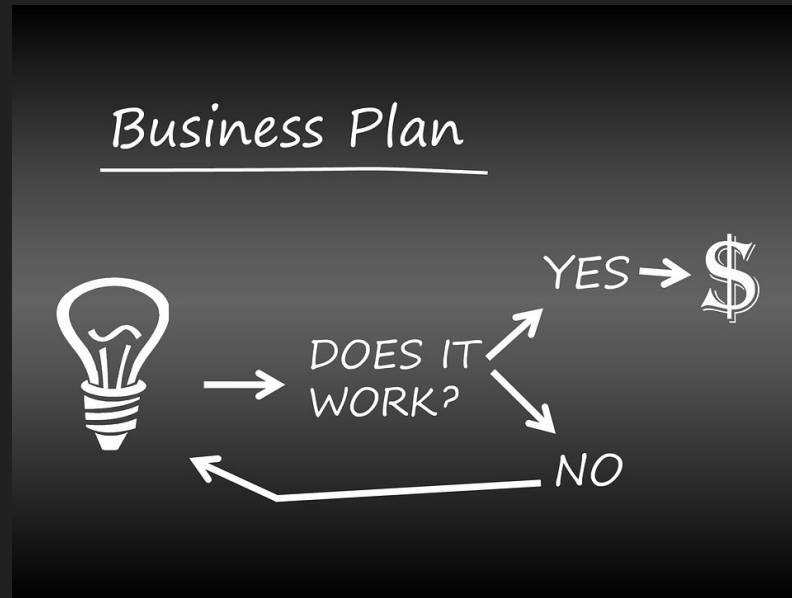

**Ben Lloyd Pearson**

Governor of GitHub @ Oath

# Metrics are awesome!

# But they aren't inherently valuable

# Focused metric sets can help solve specific problems

(Keep the end in mind)

And enable us to better communicate the  
value of open source efforts

We can work together to make this a  
reality

# Speaker for the Dead

What can learn from the perspective of React Intl

# A Slow Decline...

# Individual metrics can be misleading

We need a more holistic approach that  
provides better context

# The goal: analytics dashboards that target specific problems

# This was an Avoidable Death

## 1. Monitor the Development Pace

- a. Trend lines to identify long term changes
- b. Y-o-Y acceleration/deceleration to identify shorter term changes

# This was an Avoidable Death

## 1. Monitor the Development Pace

- a. Trend lines to identify long term changes
- b. Y-o-Y acceleration/deceleration to identify shorter term changes

## 2. Evaluate the Contributor Distribution

- a. Commit distribution to identify sustainability of developer community
- b. Geographic distribution to identify developer communities

# This was an Avoidable Death

## 1. Monitor the Development Pace

- a. Trend lines to identify long term changes
- b. Y-o-Y acceleration/deceleration to identify shorter term changes

## 2. Evaluate the Contributor Distribution

- a. Commit distribution to identify sustainability of developer community
- b. Geographic distribution to identify developer communities

## 3. Evaluate the Organization Distribution

- a. Contributions from other organizations to identify potential partners
- b. External code as percent of total to track success of external outreach

# React Intl: Development Pace

# React Intl - Development Pace

Consistent development deceleration across project history should have triggered alarms for further analysis

The cumulative commits dropping below the long term trend line should have triggered a much bigger alarm

# React Intl: Contributor Distribution

React Intl has a history of contributions from a diverse developer community

However, most people never made more than 1 contribution

# React Intl: Organizational Diversity

# React Intl: Organizational Diversity

# React Intl: Organizational Diversity

# React Intl: Organizational Diversity

React Intl had an increasing rate of external participation relative to internal participation.

However, it never reached critical mass to hit a sustainable level of external participation

# The Plot Twist

There are still a ton of internal and external developers who use and want to contribute to this project

# The Plot Twist

There are still a ton of internal and external developers who use and want to contribute to this project

Maybe it's not too late!

What Does this Mean for You?

# Extracting More Value from Open Source Metrics

The Goal:

- Quickly gather vital information to better monitor projects for specific problems.
- Use the right data to better communicate how and where resources should be directed to better leverage open source software

# Extracting More Value from Open Source Metrics

Metric sets like these could be useful for a variety of individuals

- Community Managers
- OSPO teams
- Development Managers
- Strategists
- Software Architects
- Etc.

# Let's Work Together!

I want to collaborate with the CHAOSS community to build more informative visualization sets that help us better communicate the value of our efforts.

I've published all of the dashboards from this talk at

<http://github.com/BenLloydPearson/grimoirelab-dashboards>

P.S. I'm more than willing to grant this project to the CHAOSS community when it's ready ;-)

# Let's Work Together!

I need help to make this awesome

- What is the best way to classify and organize these metric sets?
  - Profession, purpose, goal
- What other metric sets are useful for monitoring vital health metrics?
  - Development backlog management, dependence on individual developers
- What other metric sets could help identify and solve specific problems?
  - Building better organizational partnerships, identifying project risks
- How can we better combine data sources to produce more context?
  - Evaluating the effects of events on development pace, contributor distribution, organizational distribution.
